Parts Catalog

Ordering Replacement Parts
To order replacement parts, please supply the part number, the name, and a description of each part ordered.

Understanding the Reference Numbers
Each item listed in this manual has a reference number. The reference number for a part also appears in the parts list, along with other information about the part.

The catalog uses two special reference number systems, one to indicate parts in a service assembly and another to indicate the quantity of a given part in an assembly.

Service Assembly Reference Numbers
Parts in service assemblies have reference numbers in the form of a letter and a number. The letter represents the service assembly and the number represents a specific part within that assembly.

For example, a wheel assembly might be identified by reference number 6, P-6 for P, P-6 for P, P-6 for P-6, and the wheel's size. When you order the assembly, identify the reference number 6, you receive all parts identified by reference numbers 6, 6P, and 6S.

However, you may also order any part individually. Reference numbers in this section are identified by reference numbers including quantity and in part list.

In the Reference Numbers section, you will find that the reference number for the form of the quantity of the part, the quantity, the application symbol, and the quantity of the reference number.

For example, P in Reference, the reference number 2327 means the form of the part identified by reference number 27 are in stock.
